### HOW TO REPLY TO THIS NOTICE:

#### I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.**

### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Gianni Minutoli on 07/08/2008.

The application has been amended as follows:

1. Claim 1 has been amended to state - - An imager device, comprising:  
an array of pixels; and  
a first circuit electrically coupled to at least one pixel of said array , said first circuit being adapted to output a digital representation of an analog pixel signal based on a difference between a reference signal current and pixel signal current, said first circuit *for calibrating* the reference signal current *only* when the reference and pixel signal currents are not equal. - -
2. Claim 42 has been amended to state - - A method of operating an imager, said method comprising the steps of:  
converting a reference signal voltage into a first current;  
converting a pixel signal voltage into a second current;

Art Unit: 2622

calibrating the first current *only* when the first and second currents are not equal;  
and

outputting a digital code representative of the pixel signal based on a difference  
of the first and second currents. - -

3. Claim 18 has been changed to depend on independent claim 16 instead of the  
cancelled claim 17 from which it originally depended.

***Allowable Subject Matter***

**Claims 1-2, 4-5, 7, 9-10, 12, 16, 18, 21, 23-24, 42-45 and 47** are allowed.

The following is an examiner's statement of reasons for allowance:

In regard to independent **Claim 1**, the closest prior art of record fails to teach or  
reasonably suggest, "*An imager device, comprising:*

*an array of pixels; and*

*a first circuit electrically coupled to at least one pixel of said array , said first  
circuit being adapted to output a digital representation of an analog pixel signal based  
on a difference between a reference signal current and pixel signal current, **said first  
circuit for calibrating the reference signal current only when the reference and  
pixel signal currents are not equal.***"

Regarding dependent **Claims 2, 4-5, 7, 9-10 and 12**, these claims are also allowed because they depend on allowed independent claim 1.

With regard to independent **Claim 16**, the closest prior art of record fails to teach or reasonably disclose, "*An imager device comprising:*

*an array of pixels;*

*a first circuit coupled to a pixel of said array, said first circuit converting an analog reference signal voltage into a reference current;*

*a second circuit coupled to the pixel, said second circuit converting an analog pixel signal voltage into a pixel current; and*

***an analog-to-digital converter coupled to said first and second circuits, said analog-to-digital converter modifying a resistance of said first circuit when the reference and pixel currents are not equal and outputting a digital value corresponding to the analog pixel signal voltage based on a difference of said currents.***"

With regard to dependent **Claims 18, 21 and 23-24**, these claims are allowed because they depend on allowed independent claim 16.

Art Unit: 2622

In regard to independent **Claim 42**, the closest prior art of record fails to teach or reasonably suggest, “A method of operating an imager, said method comprising the steps of:

*converting a reference signal voltage into a first current;*

*converting a pixel signal voltage into a second current;*

**calibrating the first current only when the first and second currents are not equal;** and

*outputting a digital code representative of the pixel signal based on a difference of the first and second currents.”*

Regarding dependent **Claims 43-45 and 47**, these claims are allowed because they depend on allowed independent claim 42.

The following are the closest references found:

**Clark et al. (US Patent No.: 6433822B1)** disclose an architecture for self-calibration and fixed-pattern noise removal in imager chips. The column-to-column fixed pattern noise and/or pixel-to-pixel fixed pattern noise is determined through a self-calibration operation. During operation of the imager chip, when a value of a pixel is read, the read value is compensated with the fixed-pattern noise corresponding to either the column fixed pattern noise corresponding to the column having the pixel from which

Art Unit: 2622

the value was read or to the pixel fixed pattern noise corresponding to the pixel from which the value was read.

**Cho (US Patent No.: 7227488B2)** discloses a signal processing circuit which outputs a digital word corresponding to a current source controlled by a physical response. The signal processing circuit includes an analog integrated circuit for generating an analog signal in response to a time varying reference signal and a signal corresponding to the current source controlled by the physical response, a reference signal generator for generating a reference signal, a comparator for comparing the analog signal with the reference signal, an output circuit for generating the digital word indicating a time interval defined by a start signal and an end signal indicating a transition of an output of the comparator, and a controller inactivating the comparator in response to the end signal.

### ***Conclusion***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
